

# ANSWERS

1. **The study of bugs and their development on human corpses to determine time of death is called entomology. Correct Answer is B.**

Forensic entomologists study the larvae growth on human corpses to determine when this person died. They can do this because different bugs feed on corpses at different stages of decomposition.

2. **Luminol can be used to detect blood, even if it's been wiped from a surface. Correct Answer is C.**

Luminol is a chemical agent that reacts to hemoglobin and other minerals found in the blood.

3. **What does the term "forensic" mean in Latin? Correct Answer is C.**

According to Dictionary.com "Origin: 1650-60; L forēns(is) of, belonging to the forum, public (see forum, -ensis) + ic"

4. **What is involuntary manslaughter? Correct Answer is A.**

An example of manslaughter is if someone gets hit by a car by accident. The driver did not mean to kill the pedestrian,

5. **Entomology as a tool to solving criminal cases was first used by this man. Correct Answer is B.**

Song Ci worked as a forensic expert and a presiding judge in China during the Song Dynasty (960 – 1279). His book, "Collected Cases of Injustice Rectified" has been translated from Chinese into many languages including German, English and French.
